

PostgreSQL Fix Analysis

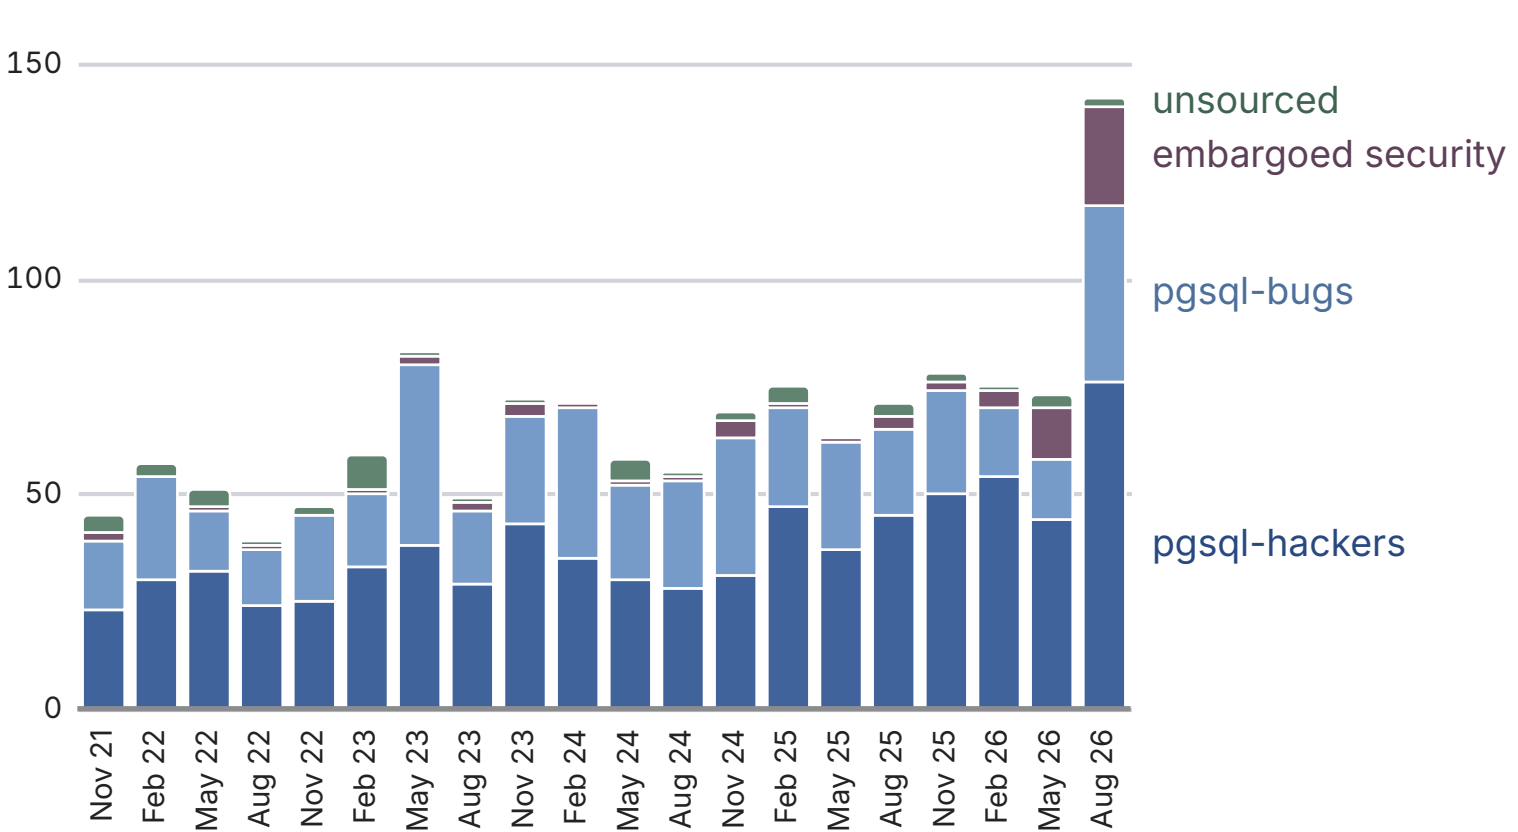

Fixes by Release

Documented fixes. a fix = one release-notes item, deduplicated across backpatched branches. Shipped releases only; out-of-band releases excluded

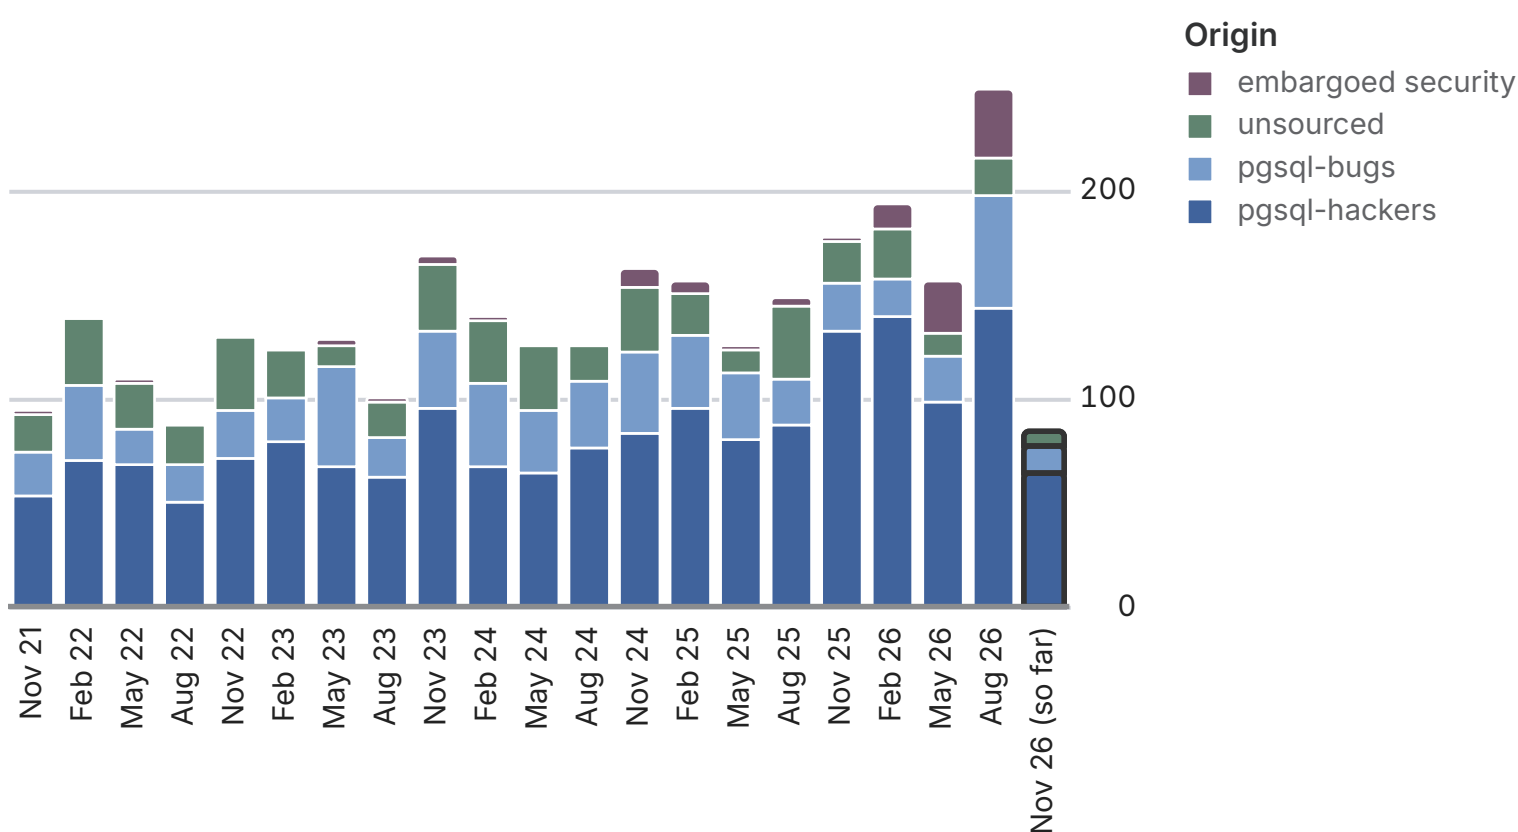

Fixes by Release by Origin

Documented fixes by source: a fix = one release-notes item, deduplicated across backpatched branches. Shipped releases only; out-of-band releases excluded

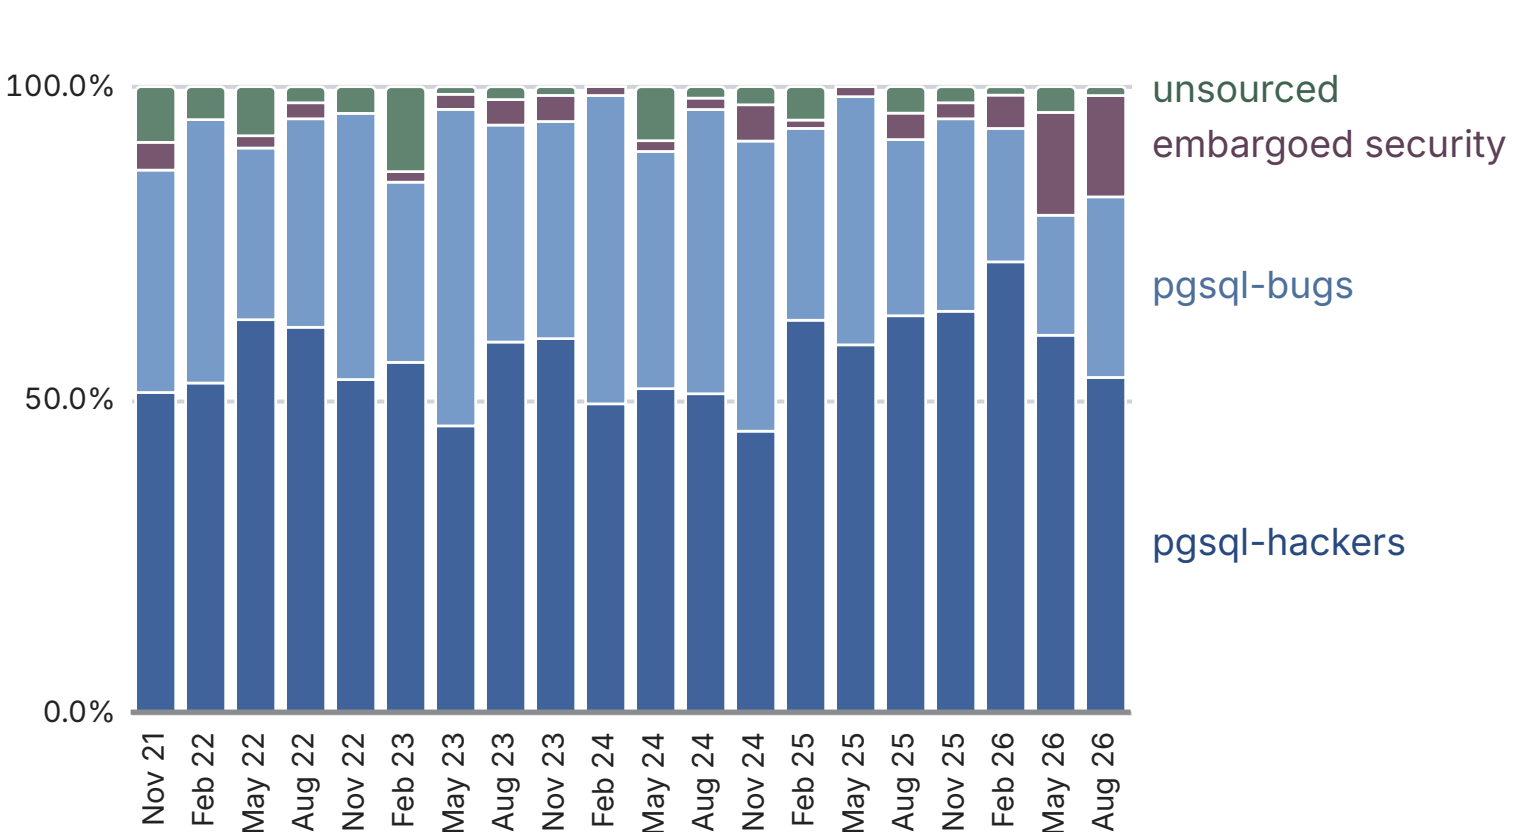

Fix Commits per Release

Committed fixes by source: a fix = one distinct fix-commit subject, deduplicated across backpatched branches, in the release it shipped in. Dashed bar = the next release so far (no security until wrap)

Fix Origin Share per Release

Same documented fixes as shares; shipped releases only, out-of-band excluded
— postgresql-bugs supplies a quarter to a third

AI-flagged Commits per Month, by Origin

Master commits whose message discloses AI involvement (a vendor and a work role); stacked, so the top edge is the monthly total
