

PostgreSQL Fix Velocity — Changelog

Fixes per Scheduled Minor Release, by Major Version

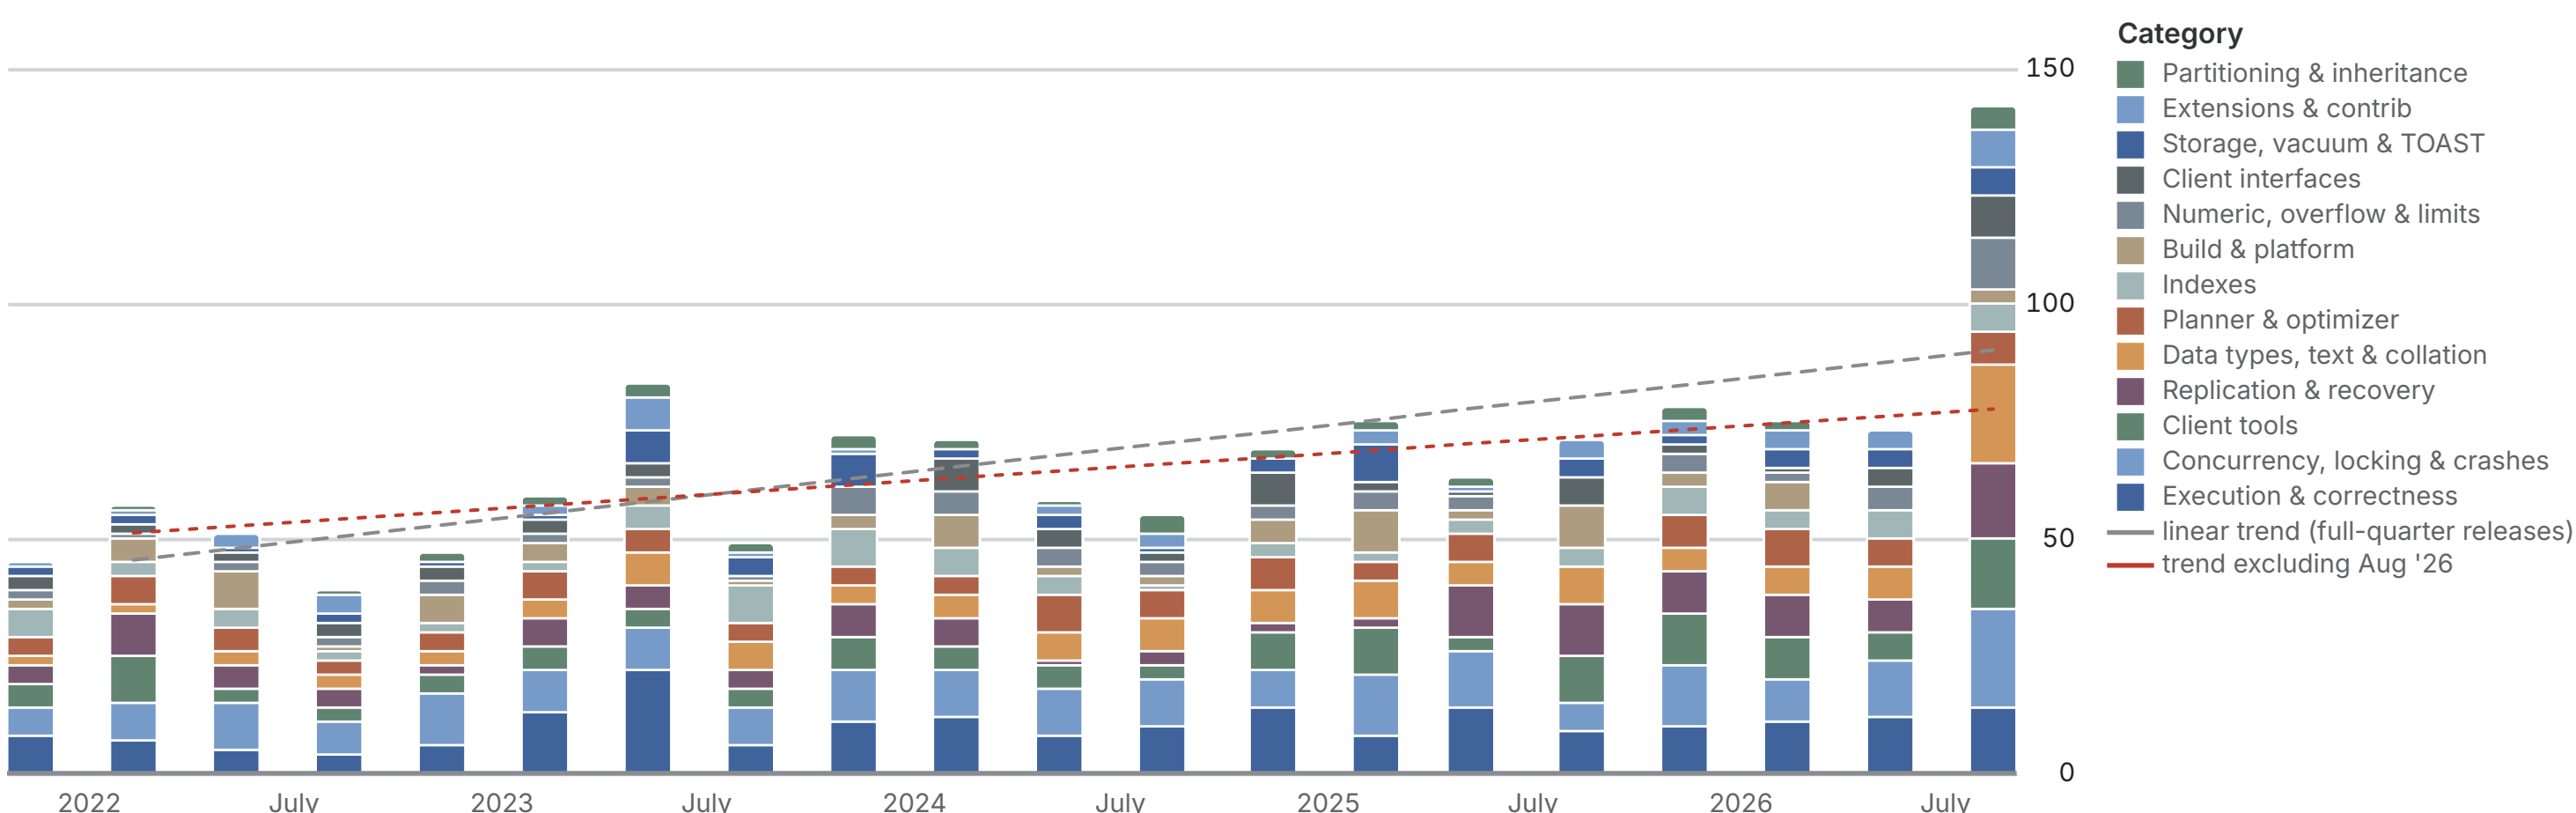

A fix backpatched to all branches appears on each line; shipped releases only (the upcoming release has no changelog yet)

PG18 PG17 PG16 PG15 PG14 pooled trend trend excluding latest release

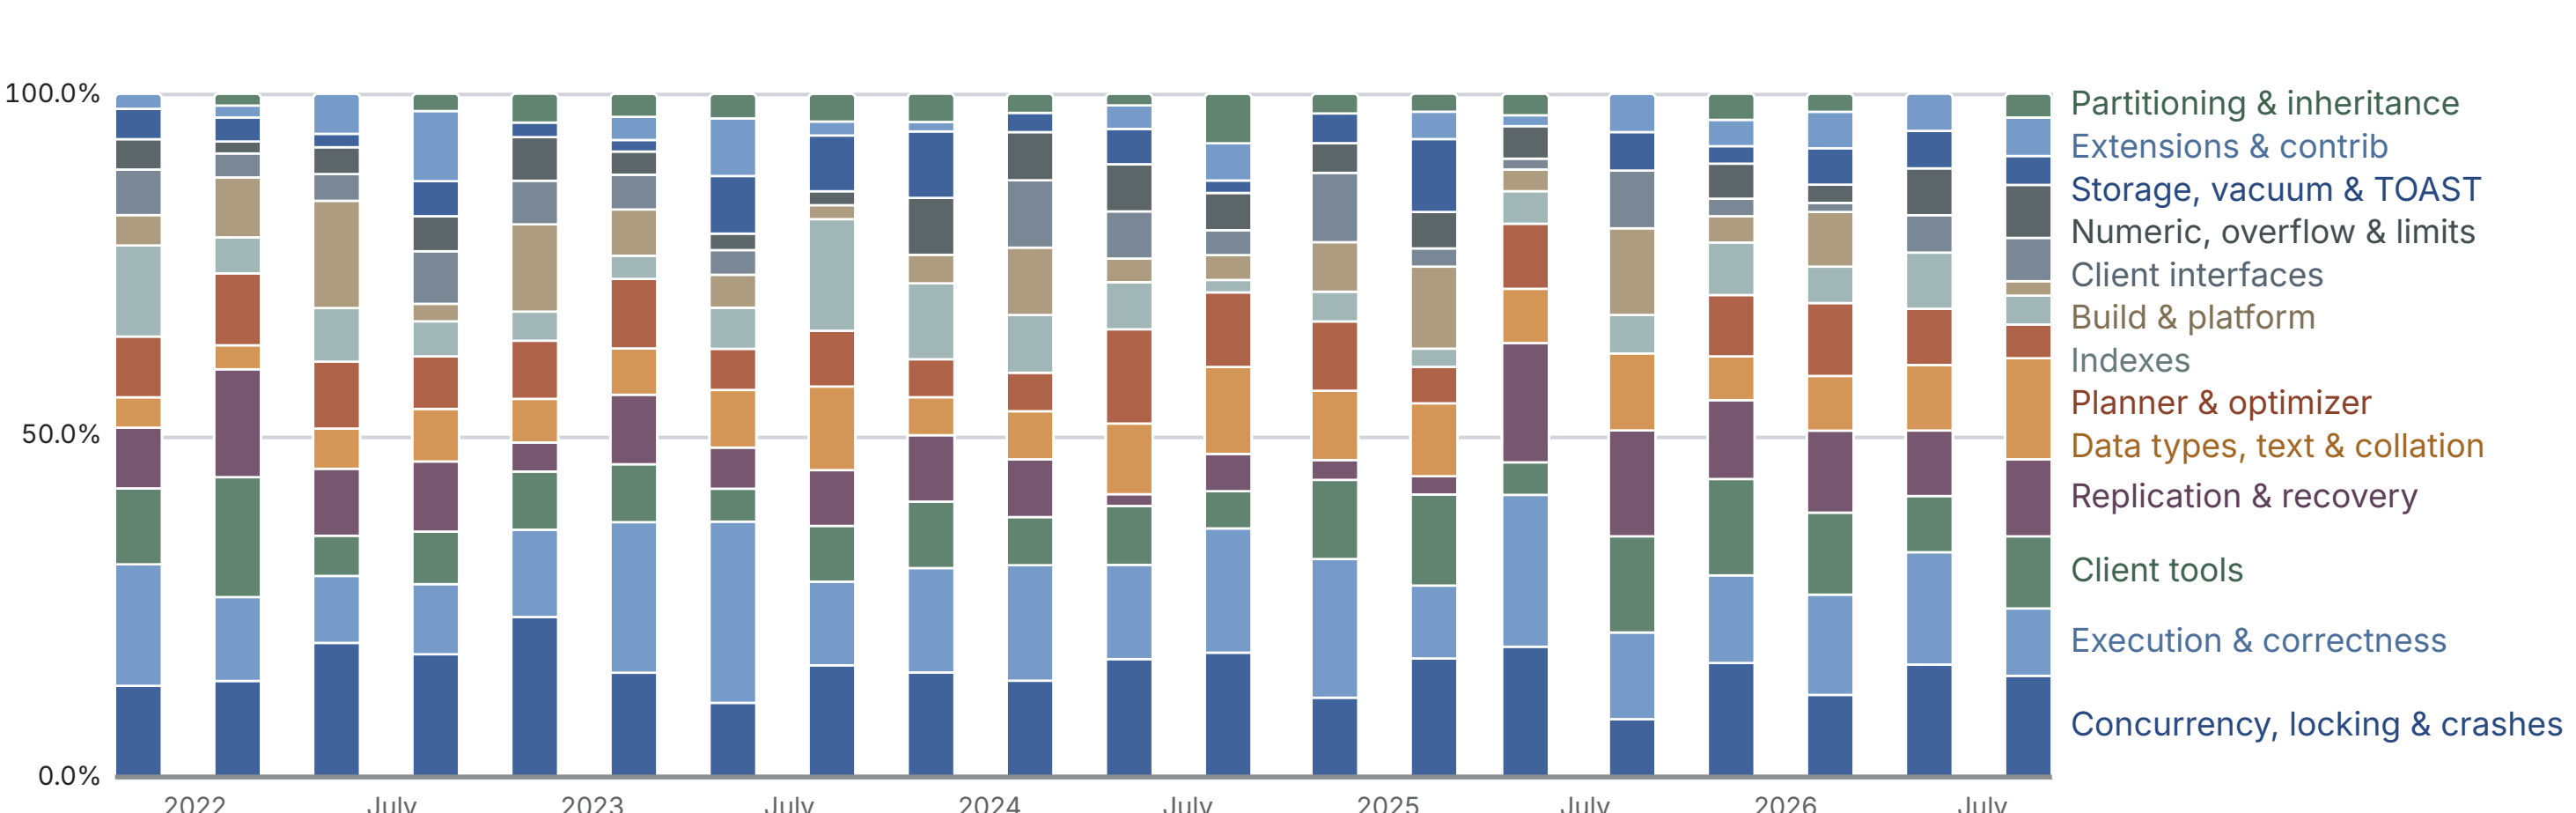

Category Mix per Full-Quarter Release

Distinct fixes; backpatched duplicates collapsed across branches

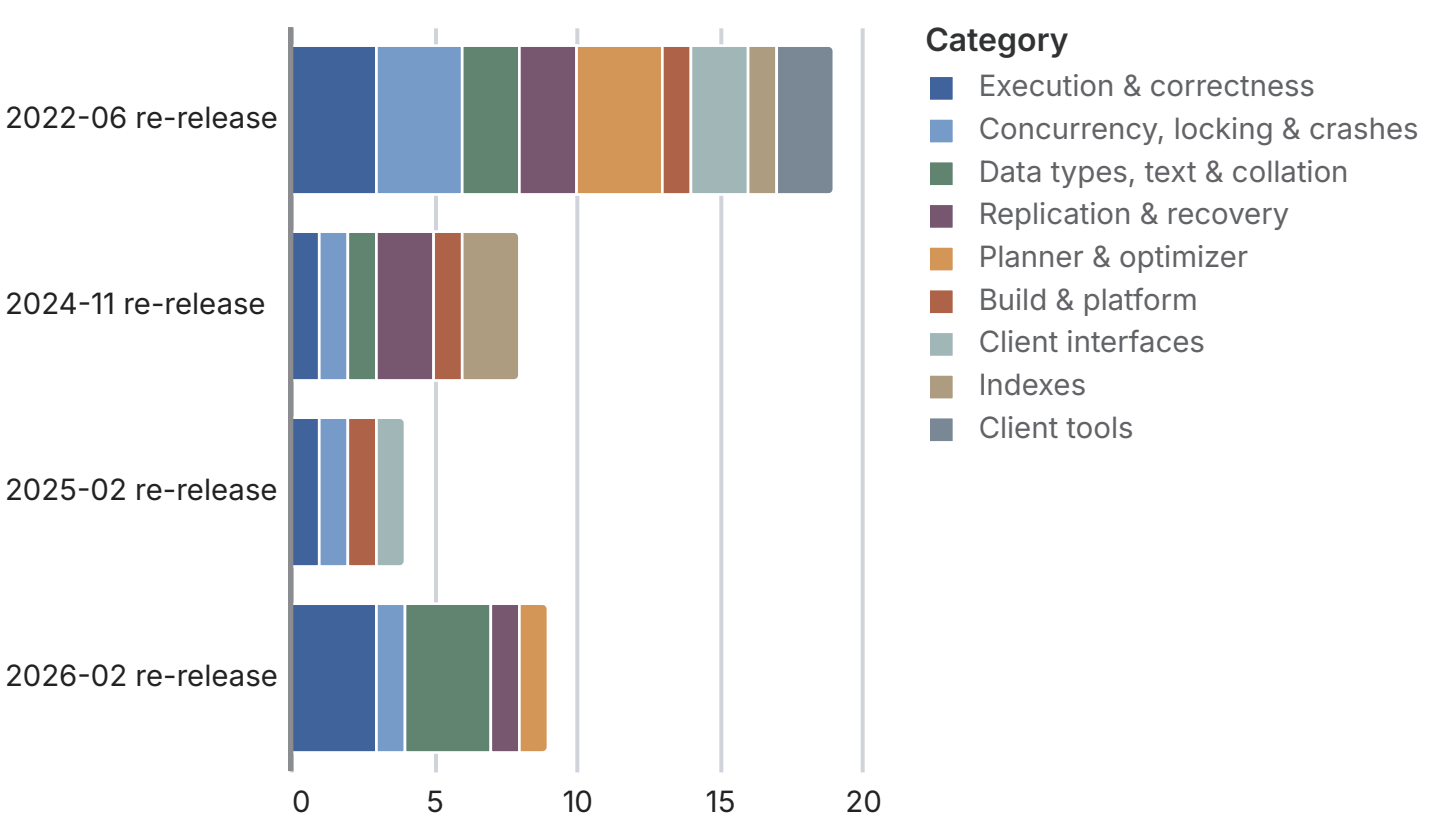

Same Data as Shares of Each Release

100% stacked

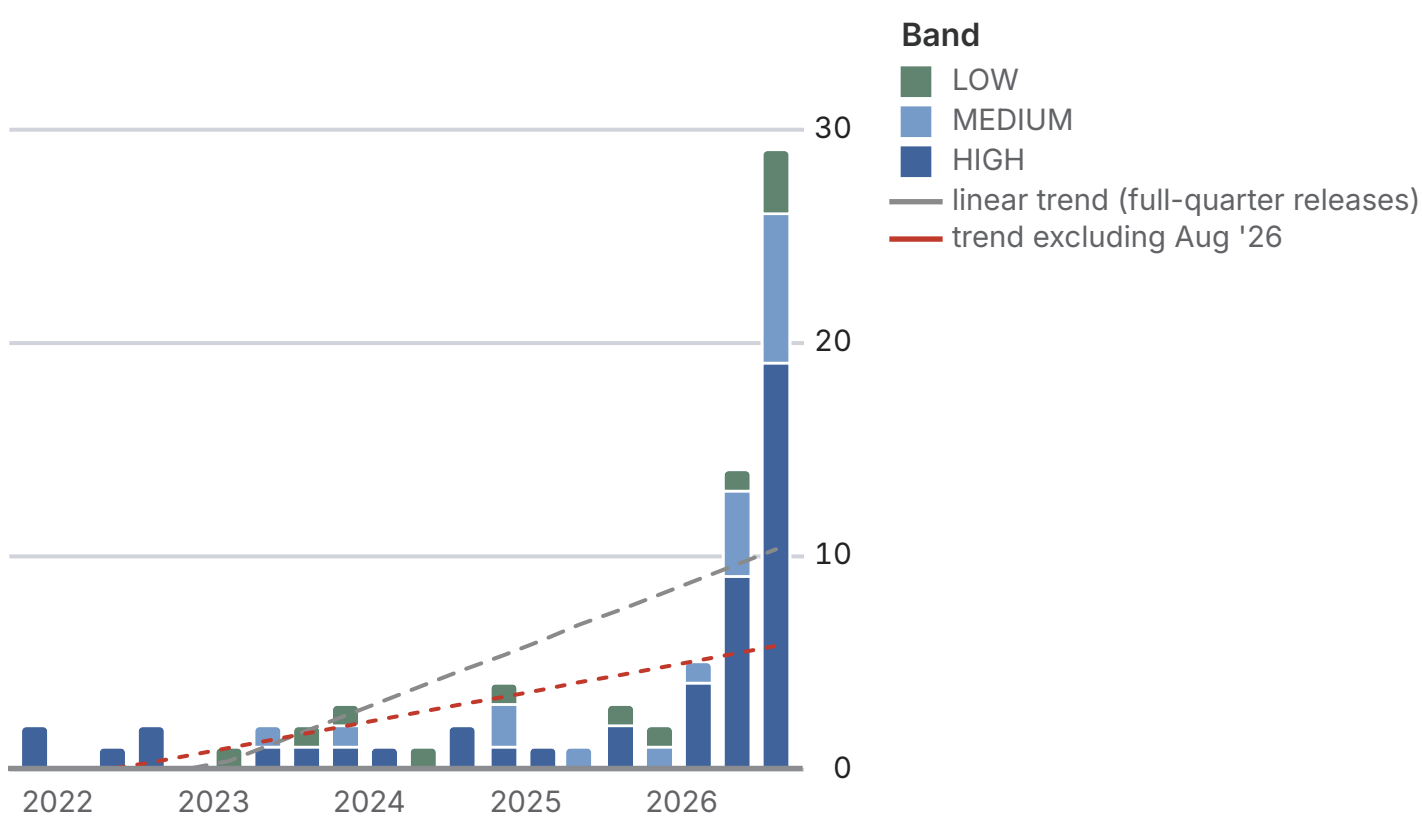

The Out-of-Band Emergency Releases

Re-releases shipped one or two weeks after a scheduled release

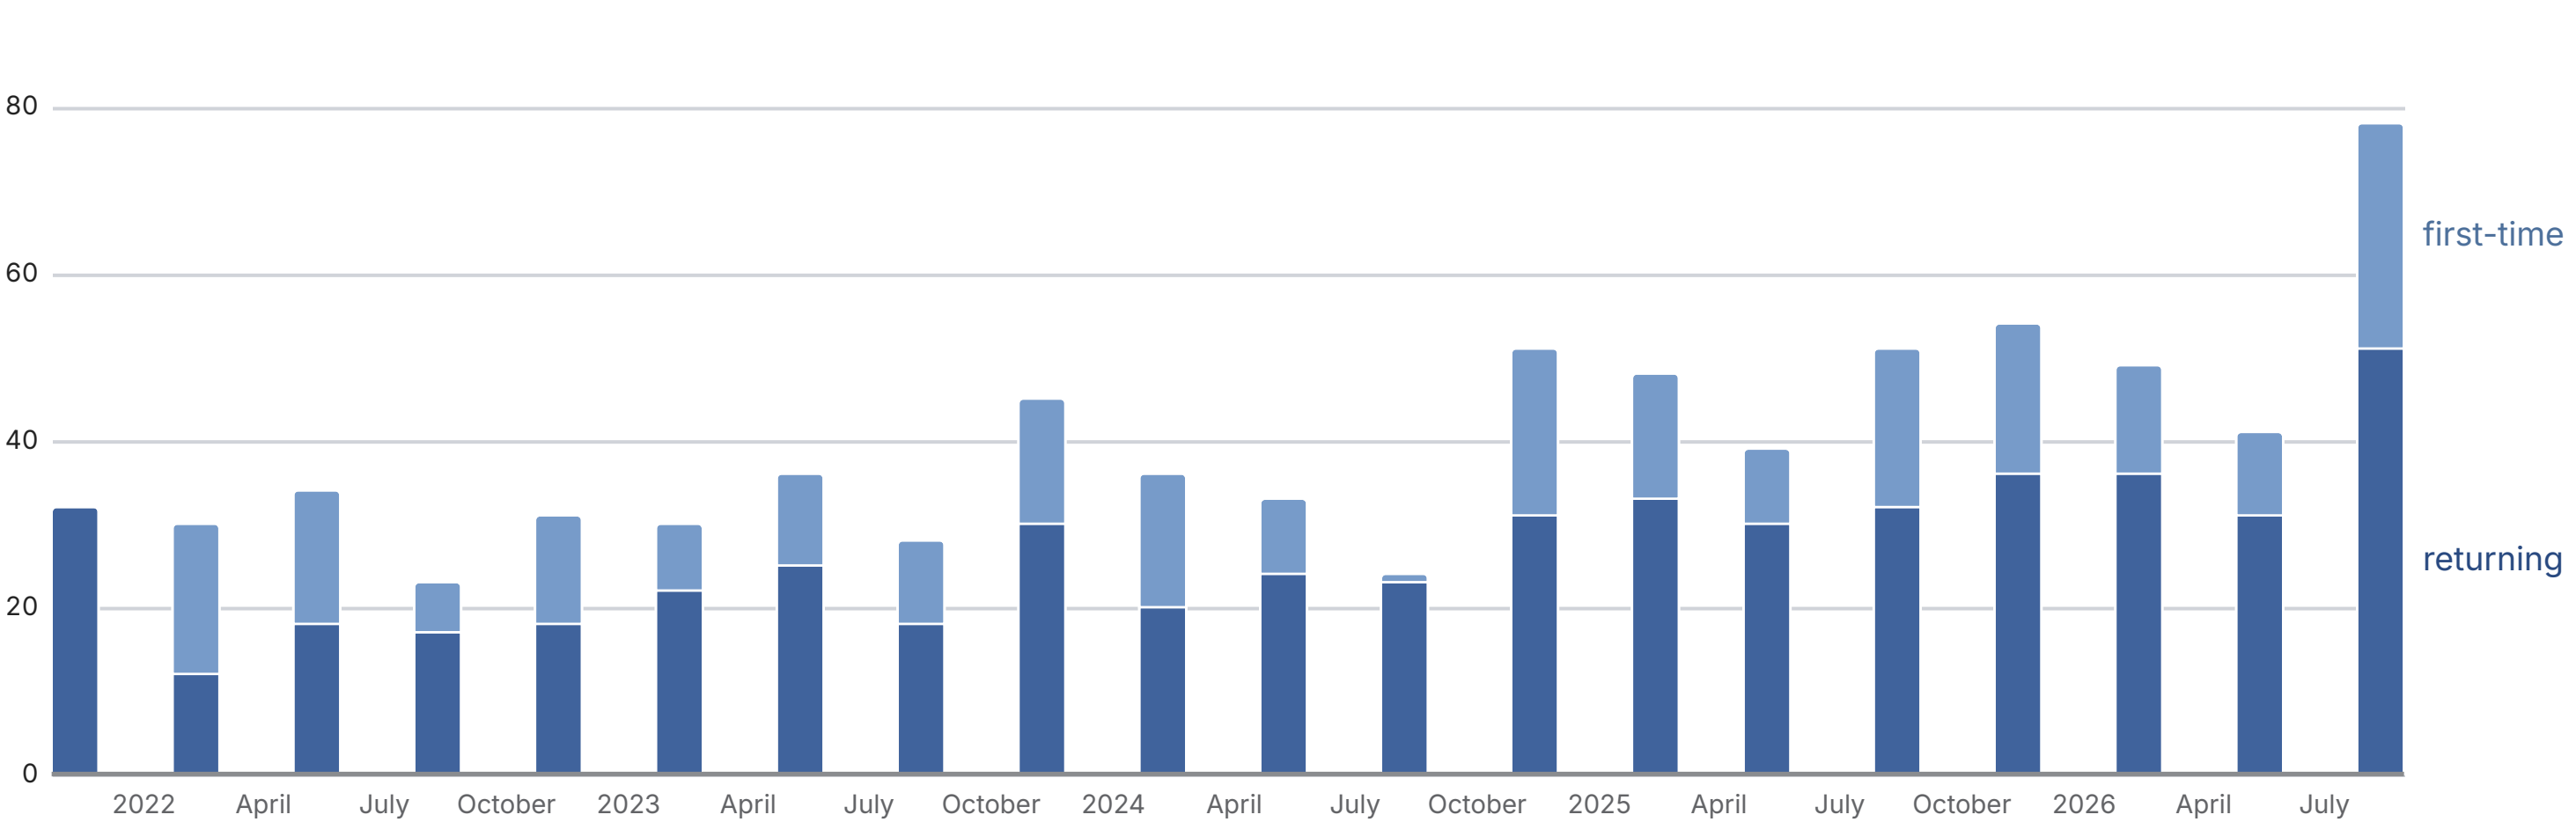

The Security Hockey Stick

CVE-bearing fixes per scheduled release, by CVSS v3 severity band

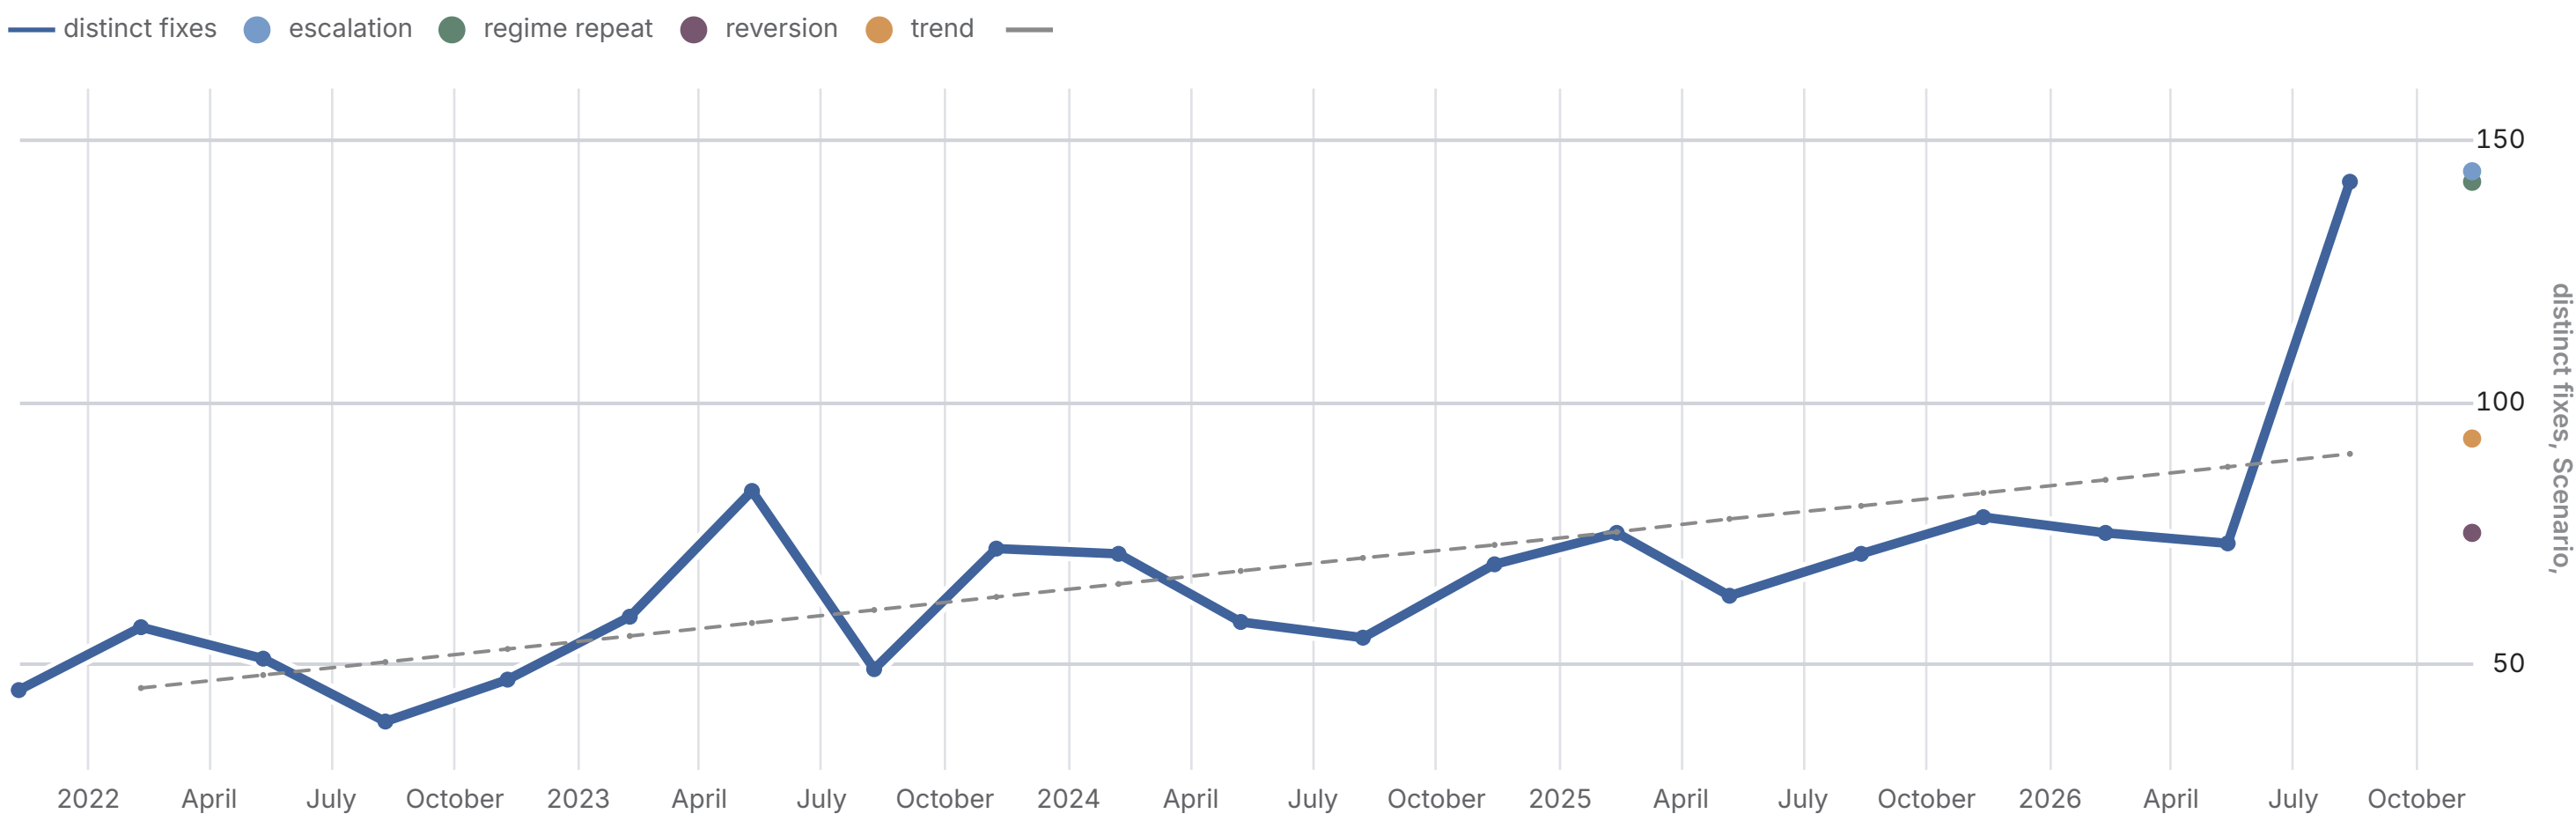

Contributors per Release: First-Time vs Returning

Names credited in the release notes; first-time = new to this 2022+ corpus

Next-Release Projection Scenarios

Historical distinct fixes per full-quarter release, with four scenarios for the next release

Scenario Assumptions

Projected dt	Scenario	fixes	Assumption
12 Nov 2026	reversion	75	the latest release was a one-off: return to the mean of the few full-quarter releases before it (reversion_baseline_releases of them), with a one-sample-standard-deviation band over every earlier release but the latest
12 Nov 2026	trend	93	least-squares line through every earlier full-quarter release, extended one slot
12 Nov 2026	regime repeat	142	whatever produced the latest release keeps delivering at that level
12 Nov 2026	escalation	144	the latest release is the new base and growth continues at the fitted trend rate

All Release Releases

Release dt	Versions	Distinct fix (Count)	Security fix (Count)	Distinct cve (Count)	Is out of band
